

ARYAN RUSTAGI

Full Stack Developer | AI-Integrated Web Applications | MERN Stack

Jaipur, Rajasthan, India | [Email](#) | +91 8580799610 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Full Stack Developer and Computer Science student who has built and deployed 3 production-grade web applications (73 REST API endpoints, 26.6K+ lines of custom code) using React.js, Node.js, Express.js, MongoDB, and PostgreSQL. Hands-on experience integrating LLMs and AI APIs (Llama 3.1, Groq, OpenAI, Gemini) into real products, including AI-driven sentiment analysis and a multi-provider API failover pipeline. Skilled in REST APIs, JWT authentication, Socket.IO real-time systems, Docker, and CI/CD. Seeking an Engineering Intern role to build AI-powered products and ship features with real business impact.

• TECHNICAL SKILLS

- **AI & LLM Integration:** Llama 3.1, Groq API, OpenAI API, Gemini API, AI API Integration, LLM-Powered Features, Prompt Engineering, API Failover Architecture
- **Frontend:** HTML5, CSS3, JavaScript, React.js, Next.js, Vite, Tailwind CSS
- **Backend:** Node.js, Express.js, Python, FastAPI, REST API Development, JWT Authentication, OAuth 2.0 (Google), Socket.IO
- **Databases:** MongoDB, Mongoose, PostgreSQL
- **Tools & Platforms:** Git, GitHub, Docker, Docker Compose, Linux, Postman, Vercel, Render, CI/CD
- **Concepts:** Full Stack Web Development, Real-Time Applications, WebSockets, Role-Based Access Control (RBAC), Deployment Workflows

PROJECT EXPERIENCE

- **Stock Analyzer — AI-Powered Financial Analytics Platform** | May 2026 – Sept 2026 | [Live Demo](#) | [GitHub](#)
 - Built a full-stack AI-driven analytics platform integrating Llama 3.1 (via Groq API) and 3 market data providers (Finnhub, Alpha Vantage, Twelve Data) to automate sentiment analysis and portfolio insights, shipped across 90+ commits and 28 merged PRs.
 - Engineered a 3-tier API failover pipeline with 60-second in-memory TTL caching and 300ms debounce, reducing API failure rates by 95% and improving reliability.
 - Developed a responsive React.js and Vite dashboard with JWT-secured accounts, 10 reusable UI components across 14 views, and MongoDB data models serving 10 REST API endpoints across 4 route files.
 - Containerized backend services with Docker and Docker Compose (12-package stack including Groq SDK, Express 5, Recharts) across a ~2.4K-line MERN + LLM codebase; deployed on Render.
 - **Tech Stack:** React.js, Vite, Node.js, Express.js, MongoDB, Mongoose, JWT, Bcrypt, Groq API, Llama 3.1, Docker, Docker Compose, Render

● **GuardianGo — Tourist Safety & Emergency Dispatch Network** | Aug 2026 – Sept 2026 | [Live Demo](#) | [GitHub](#)

- Architected a dual-portal emergency response network with 26 components across 41 views (traveler and admin interfaces) for SOS alerts, GPS tracking, and incident status, built across 38 commits and 9 merged milestones (Smart India Hackathon 2026).
- Delivered real-time SOS and GPS synchronization using Socket.IO and WebSockets: 2-second location refresh, 30-second geofence checks, and sub-second message delivery.
- Integrated an SMS-to-WebSocket webhook fallback across a 41-endpoint, 12-route-file backend to maintain alert delivery when real-time connections fail.
- Implemented RBAC and JWT authentication for separate traveler and responder workflows in an ~18.4K-line full-stack + Python AI codebase (24-package stack including FastAPI, Leaflet, Mappls, Socket.IO).
- **Tech Stack:** React.js, Node.js, Express.js, MongoDB, Python, FastAPI, JWT, Socket.IO, WebSockets, REST APIs, GPS Integration, SMS Webhooks

● **Ranjan Ayurveda — Dual-Portal Ayurvedic Clinic Management Platform** | Aug 2026 – Sept 2026 | [Live Demo](#) | [GitHub](#)

- Built a dual-portal clinic management platform with 14 components (8 shared, 4 pages, 2 apps) across dual Express servers, delivered in 10 milestone commits.
- Designed a scheduling engine using a 4-second polling stream and a 30-minute slot-locking buffer to prevent double-bookings during concurrent appointment requests.
- Secured 22 REST API endpoints using JWT, Bcrypt, Helmet, and rate limiting to reduce exposure to common web vulnerabilities.
- Deployed containerized services with Docker across a 19-package stack (Express 5, Mongoose 9, React 19) in a ~5.8K-line dual-server, dual-UI codebase.
- **Tech Stack:** React.js, Node.js, Express.js, MongoDB, Mongoose, JWT, Bcrypt, Helmet, Rate Limiting, Docker, REST APIs

EDUCATION

Bachelor of Technology (B.Tech), Computer Science Engineering

Kalvium UG Program in Computer Science (Software Product Engineering) — JECRC University, Jaipur, Rajasthan
2025 – 2029 | CGPA: 8.73 / 10.00

ACHIEVEMENTS & EXTRACURRICULAR ACTIVITIES

- Secured 3rd Position, Round 1, Code Hunt 2025 — algorithm and data structure challenges.
- Core Developer, Smart India Hackathon 2026 — built GuardianGo emergency dispatch platform (41 endpoints, real-time SOS/GPS system) as part of a competitive team project.
- Open Source Contributor, Zerocode (Java testing framework): authored a comparative testing-framework guide covering 5 frameworks (Zerocode, REST-Assured, Karate, Postman, Cucumber) — GitHub PR #796.
